Anubhav Rajoria – DevOps Engineer

Phone: +91-7415587105 | **E-mail**: connect.anubhavrajoria@gmail.com | LinkedIn

---

PROFESSIONAL SUMMARY

Cloud/DevOps Engineer with 5 years of IT experience, including 4+ years of experience in Cloud Computing, Infrastructure as Code, Configuration Management, Security, OS Patch Management, Automation, and Production Support. Hands-on experience provisioning and managing GCP infrastructure using Terraform, with knowledge of GCP networking, compute, storage, GKE, Cloud Logging & Monitoring, Cloud Identity, IAM, Service Accounts, and OS Patch Management.

Experienced with Azure infrastructure services, Microsoft Entra ID, Azure Arc, Microsoft Defender for Endpoint, Shell scripting with gcloud CLI, and Windows/Linux administration.

Experienced in troubleshooting production infrastructure and operational issues. Strong understanding of ITSM, High Availability, Disaster Recovery, RPO/RTO, Incident & Change Management, DNS, TLS, hashing, digital signatures, and digital certificates.

TECHNICAL SKILLS

- **OS Platforms**: Windows, Linux (RHEL, Ubuntu)
- **Containerization**: Kubernetes, GKE
- **Cloud Platforms**: Google Cloud Platform (GCP), Azure & AWS
- **FinOps & Cloud Cost Optimization**: GCP cost estimation, GCP Pricing Calculator
- **Database & SQL**: MSSQL, MySQL (Basic SQL Queries, Stored Procedures, Triggers)
- **Infrastructure as Code**: Terraform, Terraform Cloud
- **Automation & Configuration**: Ansible, AWX, YAML, Shell
- **DevOps & CI/CD**: Git, GitHub Enterprise, Bitbucket, Jenkins
- **Security & Identity**: Azure Arc, Microsoft Defender for Endpoint, Microsoft Entra ID, Windows Active Directory, GCP Cloud Identity, IAM
- **Monitoring & Logging**: GCP Monitoring & Logging, Splunk
- **GenAI & Agentic AI**: Familiarity with generative AI and AI-assisted development tools, including ChatGPT, Gemini, Microsoft Copilot, GitHub Copilot, Claude Code, and MCP servers in enterprise environments.
- **ITSM & Ticketing Tools**: ServiceNow and Jira

WORK HISTORY

HCLTech – Lucknow, India

Senior Analyst, Nov 2021 – Present

Worked with **three major European banking clients**, supporting highly secure development centers and infrastructure environments with stringent security, compliance, and operational requirements.

1. Google Cloud Infrastructure Management

- Provisioned, managed, and decommissioned GCP infrastructure using Terraform and Terraform Cloud, supporting GCP IaaS and PaaS services across client environments.
- Managed GCP services including Compute Engine, GKE, Cloud Storage, Cloud SQL, Filestore, Shared VPC, Firewall Policies, Pub/Sub and related infrastructure components.
- Worked with Git, GitHub, and Bitbucket for infrastructure-as-code management, version control, and collaborative development.

2. FinOps & Cloud Cost Optimization

- Estimated pre-migration cloud costs for prospective workloads using the GCP Pricing Calculator to support migration planning and budgeting.
- Performed GCP resource right-sizing and identified idle disks and unused static IP addresses to support cloud cost optimization.
- Configured budget alerts with FinOps team to improve cost visibility and proactively monitor cloud expenditure.

3. GCP OS Patch & Vulnerability Management

- Worked as part of the GCP OS Patch Management team, troubleshooting a client broken patch-management environment, performing detailed RCA, and collaborating with GCP Support to restore stable patching operations. Received client appreciation for the troubleshooting and remediation efforts.
- Designed and implemented automated GCP OS Patch Schedules for Windows and Linux servers across Dev, QAT, and Production environment, with progressive patch deployment throughout the month.
- Monitored patch operations, resolved recurring deployment issues, and managed OS compliance reporting for a fleet of GCP VMs.
- Collaborated with security teams to deploy and troubleshoot Azure Arc and Microsoft Defender for Endpoint (MDE) agents, supporting endpoint security, governance, and vulnerability-management requirements.
- Worked with security teams to identify vulnerabilities in software libraries and packages and supported remediation activities to address identified security vulnerabilities.

4. Application Migration & Infrastructure Assessment

- Supported client application migrations to GCP by provisioning required infrastructure and collaborating with application owners for migration and onboarding activities.
- Performed application infrastructure assessments covering servers, databases, middleware, application types, and technologies, using ServiceNow Directory, client records, and discussions with application owners.
- Consolidated application and infrastructure information in Confluence, creating structured documentation and knowledge bases for migration activities.
- Created application architecture diagrams using draw.io based on information gathered during assessment and discovery which was then further reviewed by L3 team and Senior Architects.

5. Automation & Configuration Management

- Developed Shell automation scripts using gcloud CLI to fetch, describe, update, and collect information from GCP infrastructure resources, automating recurring operational activities.
- Developed Ansible playbooks to automate infrastructure and operational tasks, reducing repetitive manual effort and improving consistency. Automated activities including MDE installation and validation, Azure Arc onboarding, and Linux package installation.
- Used Azure CLI for Azure infrastructure and operational activities.

6. Production Support, Incident & Change Management

- Handled production incidents, infrastructure issues, and major change activities across client environments, following ITSM processes.
- Used GCP Cloud Logging and Cloud Audit Logs for structured troubleshooting, investigation, and Root Cause Analysis (RCA).
- Collaborated with application, networking, security, and vendor support teams to investigate incidents, coordinate remediation, and restore affected services.
- Worked within Agile frameworks including Scrum and Kanban for planning, execution, collaboration, and delivery.
- Used Microsoft Teams, Excel, Word, and PowerPoint for cross-functional collaboration, communication, operational reporting, technical documentation, presentations, and project coordination.

7. Infrastructure & Systems Administration

- Performed Windows Server and Linux (RHEL) administration across enterprise infrastructure environments.
- Supported Active Directory administration, including user, group, and access-related administrative activities.
- Worked with Microsoft Entra ID to create and manage user identities and groups as part of centralized identity and access management.
- Created custom GCP IAM roles, assigned role-based permissions, and provisioned service accounts to implement controlled access to GCP resources. Applied security principles including Least Privilege and Fail-Safe Defaults when providing permissions.
- Created GCP Cloud Monitoring dashboards for VM CPU, memory, and disk utilization and configured alerting notifications for infrastructure health monitoring.
- Worked with Splunk team for Splunk installation & Update, Dashboards & Alerts creation, and infrastructure and operational monitoring.

8. Disaster Recovery & Business Continuity

- Performed GCP Disaster Recovery (DR) activities, supporting DR exercises and drills to validate infrastructure recovery.
- Validated recovered infrastructure and workloads to ensure services were functioning as expected following DR activities.

PROJECTS

AUTOMATED DEPLOYMENT & MONITORING FRAMEWORK FOR ENTERPRISE APPLICATIONS USING GITSECOPS PRINCIPLE

Built an academic GitOps/SecOps deployment and monitoring framework project using Terraform, Terraform Cloud, GitHub Enterprise, GitHub Actions, Ansible/AWX, Azure Arc, Microsoft Defender for Endpoint, Splunk, and GCP, implementing IdP–SP Federation and integrating GitOps and SecOps workflows.

- **Federation (IdP–SP)**: Successfully implemented centralized identity federation, enabling secure, role-based access across cloud and security platforms with reduced credential sprawl.
- **GitOps Implementation**: Established Git as the single source of truth, enabling version-controlled, auditable, and automated infrastructure and configuration management.
- **SecOps Enablement**: Integrated monitoring, alerting, and endpoint protection to provide continuous visibility, faster incident detection, and improved security posture.
- **Framework Reusability**: Designed a modular and scalable setup that significantly reduces effort and time when onboarding or spinning up new environments.
- **Learning & Knowledge Value**: Serves as a hands-on learning framework covering real-world DevOps, Cloud, and Security workflows, bridging the gap between theory and practice.

Technology Stack used: Google Cloud Identity Account, GCP (Compute Engine, Shared VPC, Firewall, IAP, Pub/Sub, Log Router sink, GCP Patch Schedule & Jobs, IAM, Service Accounts), Azure Entra ID (Users & Groups management), Microsoft 365 Business Premium License, Terraform Cloud, GitHub Enterprise & Organization, GitHub Actions, Ansible AWX, Splunk Enterprise, Azure ARC, Microsoft Defender for Endpoint, and ChatGPT.

EDUCATION

- BITS Pilani Work Integrated Learning Programmes, Hyderabad
  B.S. Design and Computing | CGPA: 9.05 (Distinction)

- HCLTech Techbee – Early Career Program, Lucknow
  Score: 8.54

CERTIFICATIONS

- Google Cloud Certified Associate Cloud Engineer
  Google, Credential ID: 71daf323294441c6aa1d633dfae1dfd4

- Microsoft Certified: Azure Fundamentals
  Microsoft, Credential ID: 7E87F56FA06D44B

ACHIEVEMENTS

- Winner - PosterExhibit Competition | BITS Pilani, Hyderabad
  - Secured 1st Prize in the PosterExhibit Competition during the Campus Immersion event at BITS Pilani, Hyderabad Campus.
  - The poster, titled "From Chaos to Control - Integrating GitOps in Infrastructure as Code (IaC)", demonstrated how GitOps practices introduce automation, version control, and operational consistency to infrastructure management, addressing limitations of standalone vanilla IaC workflows

- HCLTech 2good Award - Achievers League 2025 | HCLTech, Lucknow
  - Recipient of the HCLTech "2good" Award for securing distinguished performance (highest performance rating in the organization) for two consecutive years.
  - The award recognizes consistent high performance, dedication, and impactful contributions within the organization.

- McKinsey Forward Program
  - Selected participant in McKinsey's professional development program.
